A nationally accredited NCCER certified safety training program, the Construction Site Safety Technician (CSST) course will provide the student with the training and certification necessary to become a safety professional in the construction industry. It meets all OSHA 510 requirements and encompasses training in over 40 vital topics for safety professionals, including:

- The Role of the Safety Professional
- Introduction to OSHA & State Programs
- Accident Investigation and Record Keeping
- Ladders and Scaffolding
- Fall Protection
- PPE/Respiratory Protection
- Atmospheric/Gas Testing
- Permitting
- LOTO
- Trenching & Excavation
- CPR/First Aid
- Substance Abuse
- Crane Safety and Rigging
- Crisis Management
- Hazard Recognition and Control
- And Other Critical Safety Topics

This course is specifically designed for current site safety coordinators and foremen or experienced journey level craft professionals seeking a career in the safety field.
